

BAG-CLOSING SOLUTIONS FOR BAKERIES OF ALL SIZES

When it comes to running a bakery, saving time means saving money. Automated packaging solutions can help bakers streamline operations and more efficiently manage their teams.

According to PMMI's "Sustainability and Technology: The Future of Packaging and Processing" report, automating repetitive manual tasks — such as those often found in packaging areas — can boost productivity, free up employees to focus on other tasks, and improve overall job satisfaction, which in turn can lead to higher retention rates. The study revealed that 96% of the companies surveyed reported success in using automation to address labor force challenges and reduce manual tasks.

Packaging automation can also provide bakers with enhanced quality control, fewer employee injuries, reduced material waste and less down time.

Whether you operate a high-volume commercial bakery or a local retail bakery, Kwik Lok's automatic and semi-automatic machines provide a one-stop, full-service solution that can reduce production time and improve operational efficiencies.

Commercial Bakery Solutions

The Kwik Lok 893C Automatic Bag Closing Machine is designed specifically for high-volume bakeries. The computer-controlled, high-speed bag closure keeps the packaging area running smoothly and systematically, minimizing costly line interruptions. The automated functionalities and smart technology allow production line employees to turn their attention to other tasks.

The 893C's features include:

- Bag closing output of up to 120 bags per minute
- Real-time, user-friendly access to production data, machine-life data and diagnostics via smart phone, tablet or computer
- State-of-the-art motion control
- Enhanced safety elements such as an emergency stop button, alarm indicator, and bag jam detection and reversal
- Regular service reminders to avoid unnecessary downtime
- Ethernet and wireless communication
- 7-inch color touchscreen HMI
- Lok detection
- Optical bag sensor
- CE certified and cULus certified
- Printer, stand, conveyor and bag tensioner compatibility

Retail and In-Store Bakery Solutions

The versatile Kwik Fresh 093A Semiautomatic Bag Closing Machine is ideally suited for retail and in-store bakeries. It easily adapts to bakers' individual packaging needs and helps employees close bags quickly and safely ... letting them keep their focus on baking.

The 093A's features include:

- Bag closing output of up to 30 bags per minute
- Compatibility with Kwik Lok's original, Fibre-Lok and Enviro-Lok closures
- Portable and permanent-mount options
- Printing capabilities
